

RELIABILITY ANALYSIS

Cronbach's Alpha

CRONBACH'S ALPHA

A measure of reliability, specifically for internal consistency, that indicates how well a set of items work together to measure the same construct.

General Interpretation (George & Mallery, 2003):

0.90 and above – Excellent

0.80 to 0.89 – Good

0.70 to 0.79 – Acceptable

0.60 to 0.69 – Questionable

0.50 to 0.59 – Poor

Below 0.50 – Unacceptable

CRONBACH'S ALPHA

Cronbach's alpha was computed for the following constructs:

- Leisure and Social Activities (D2)
- Productivity (D4)
- Time Quantity Satisfaction (E2)
- Time Control (E5)

*D3 was initially included in Cronbach's alpha computation, but due to limited valid responses and applicable items, it was analyzed descriptively instead.

COMPUTATION

$$\alpha = \frac{k}{k - 1} \left(1 - \frac{\sum s_i^2}{s_T^2} \right)$$

- k = number of items
- s_i^2 = variance of each item
- s_t^2 = variance of the total score

Cronbach's alpha compares the variation of individual items vs the total score. Consistent items would mean respondents can answer them similarly where the total score can vary more as a group that increases alpha

DATA PREPARATION

- Responses were coded numerically for analysis
- Items were grouped by construct (D1, D2, D3, D4, E2, E3, E4, E5)
- No Opinion (N/O) and Not Applicable (N/A) were treated as missing values
- Cronbach's alpha was computed using valid responses per construct

SOFTWARE

The team used **Jamovi** (Ver. 2.6.44) and **SPSS** (Ver. 31.0.2.0) to conduct the Cronbach's alpha analysis.

SPSS was primarily used to determine how many responses were included/excluded from the computation due to missing values.

SECTION D2: LEISURE AND SOCIAL ACTIVITIES

Case Processing Summary

		N	%
Cases	Valid	213	83.9
	Excluded ^a	41	16.1
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.630

[3]

The summary shows that **213** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.630** is slightly below the commonly used threshold of 0.70 for acceptable reliability, but still indicates moderate internal consistency among the items.

SECTION D2: LEISURE AND SOCIAL ACTIVITIES

Item Reliability Statistics				
	mean	sd	item-rest correlation	if item dropped Cronbach's α
d2_1_recode	0.831	0.376	0.371	0.589
d2_2_recode	0.451	0.499	0.463	0.519
d2_3_recode	0.761	0.428	0.474	0.516
d2_4_recode	0.493	0.501	0.350	0.610

Overall alpha:

Scale Reliability Statistics	
Cronbach's α	
scale	0.630

All items show moderate item-rest correlation. Additionally, dropping any item does not substantially improve Cronbach’s alpha

SECTION D3: HOUSEHOLD MANAGEMENT

With **all items** retained:

Case Processing Summary

		N	%
Cases	Valid	26	10.2
	Excluded ^a	228	89.8
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.682

[3]

The summary shows that only **26** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.682** is slightly below the commonly used threshold of 0.70 for acceptable reliability, but still indicates moderate internal consistency among the items.

SECTION D3: HOUSEHOLD MANAGEMENT

With **all items** retained:

Item Reliability Statistics

	Mean	SD	Item-rest correlation	If item dropped
				Cronbach's α
d3_1_recode	0.885	0.326	0.568	0.567
d3_2_recode	0.731	0.452	0.520	0.582
d3_3_recode	0.846	0.368	0.445	0.629
d3_4_recode	0.808	0.402	0.364	0.682

Overall alpha:

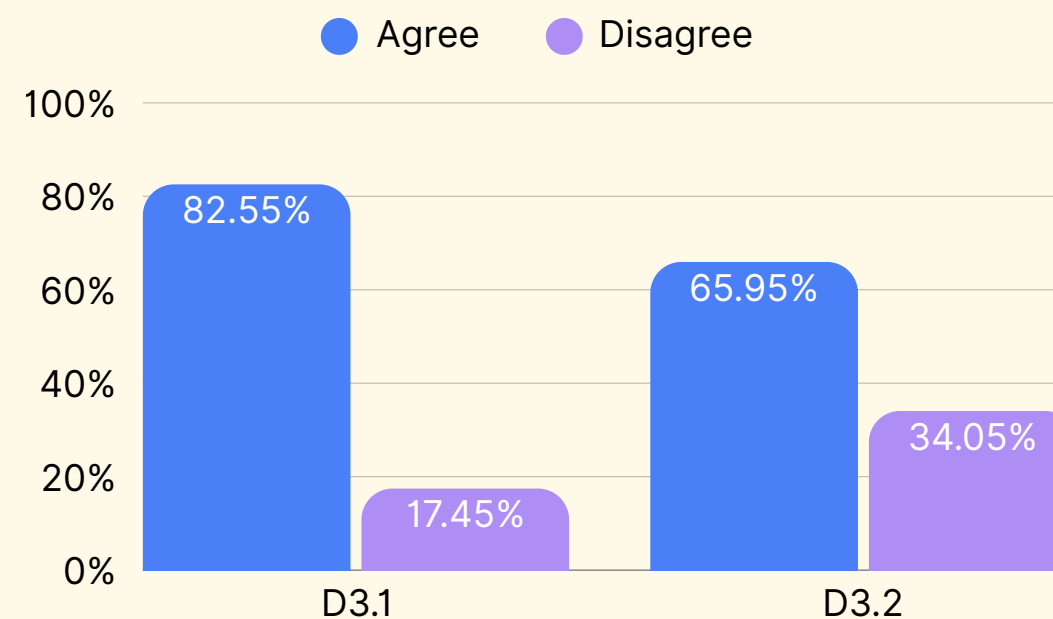

Scale Reliability Statistics

Cronbach's α	
scale	0.682
[3]	

All items show moderate item-rest correlation. Additionally, dropping any item does not substantially improve Cronbach's alpha

SECTION D3: HOUSEHOLD MANAGEMENT

With items **D3.3** (“May responsibilidad ako sa mga bata sa bahay”) and **D3.4** (“Nagagawa kong magbigay ng sapat na suporta para sa aking mga anak”) **EXCLUDED**, Cronbach’s alpha was not computed due to the limited number of items.

Since only two items were used, correlation was used instead of Cronbach’s alpha to assess their relationship. The correlation between D3.1 and D3.2 is $r = 0.27$, indicating a weak relationship between the two items.

SECTION D4: PRODUCTIVITY

Case Processing Summary

		N	%
Cases	Valid	195	76.8
	Excluded ^a	59	23.2
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.583

[3]

The summary shows that **195** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.583** is below the commonly used threshold of 0.70 for acceptable reliability, indicating poor internal consistency among the items.

SECTION D4: PRODUCTIVITY

Item Reliability Statistics

	Mean	SD	Item-rest correlation	If item dropped
				Cronbach's α
d4_1_recode	0.621	0.487	0.372	0.510
d4_2_recode	0.831	0.376	0.433	0.469
d4_3_recode	0.677	0.469	0.351	0.526
d4_4_recode	0.815	0.389	0.323	0.543

Overall alpha:

Scale Reliability Statistics

Cronbach's α	
scale	0.583
[3]	

All items show moderate item-rest correlation. Additionally, dropping any item does not substantially improve Cronbach's alpha.

SECTION E2: TIME QUANTITY SATISFACTION

With **all items** retained:

Case Processing Summary

		N	%
Cases	Valid	41	16.1
	Excluded ^a	213	83.9
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.878

[3]

The summary shows that **41** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.878** greatly exceeds the threshold of 0.70 for acceptable reliability, indicating a good level of reliability.

SECTION E2: TIME QUANTITY SATISFACTION

With **all items** retained:

All items show moderate item-rest correlation.

Additionally, dropping any item does not substantially improve Cronbach's alpha

Item Reliability Statistics

	Mean	SD	Item-rest correlation	If item dropped
				Cronbach's α
e2_1_clean	3.83	1.05	0.619	0.867
e2_2_clean	3.90	1.07	0.410	0.876
e2_3_clean	3.66	1.11	0.668	0.865
e2_4_clean	3.20	1.35	0.526	0.872
e2_5_clean	3.44	1.14	0.414	0.876
e2_6_clean	3.20	1.25	0.588	0.868
e2_7_clean	3.10	1.02	0.541	0.871
e2_8_clean	3.46	1.07	0.458	0.874
e2_9_clean	3.05	1.24	0.612	0.867
e2_10_clean	2.76	1.20	0.539	0.871
e2_11_clean	3.17	1.02	0.325	0.879
e2_12_clean	3.12	1.05	0.513	0.872
e2_13_clean	3.54	1.10	0.614	0.867
e2_14_clean	3.02	1.17	0.609	0.867
e2_15_clean	3.22	1.13	0.560	0.870

Overall alpha:

Scale Reliability Statistics

Cronbach's α	
scale	0.878
[3]	

SECTION E2: TIME QUANTITY SATISFACTION

With item **E2.8** (“Oras na nabibigay para sa pag-aalaga sa mga anak/mga umaasa sa akin nang walang pagmamadali”)
EXCLUDED:

Case Processing Summary

		N	%
Cases	Valid	226	89.0
	Excluded ^a	28	11.0
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.870

[3]

The summary shows that **226** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.870** greatly exceeds the threshold of 0.70 for acceptable reliability, indicating a good level of reliability.

SECTION E2: TIME QUANTITY SATISFACTION

With item **E2.8** (“Oras na nabibigay para sa pag-aalaga sa mga anak/mga umaasa sa akin nang walang pagmamadali”) **EXCLUDED:**

All items show moderate item-rest correlation.

Additionally, dropping any item does not substantially improve Cronbach’s alpha

Item Reliability Statistics				
	Mean	SD	Item-rest correlation	If item dropped Cronbach's α
e2_1_clean	3.30	1.13	0.463	0.865
e2_2_clean	3.23	1.14	0.484	0.863
e2_3_clean	3.15	1.16	0.530	0.861
e2_4_clean	2.59	1.32	0.545	0.861
e2_5_clean	2.93	1.25	0.451	0.866
e2_6_clean	2.88	1.13	0.522	0.862
e2_7_clean	3.09	1.10	0.549	0.860
e2_9_clean	2.73	1.17	0.645	0.855
e2_10_clean	2.58	1.24	0.579	0.858
e2_11_clean	3.14	1.11	0.483	0.863
e2_12_clean	3.16	1.14	0.458	0.865
e2_13_clean	3.53	1.05	0.462	0.864
e2_14_clean	2.86	1.22	0.621	0.856
e2_15_clean	2.72	1.18	0.601	0.857

Overall alpha:

Scale Reliability Statistics	
Cronbach's α	
scale	0.870

[3]

SECTION E5: TIME CONTROL

With **all items** retained:

Case Processing Summary

		N	%
Cases	Valid	200	78.7
	Excluded ^a	54	21.3
	Total	254	100.0

a. Listwise deletion based on all variables in the procedure.

Scale Reliability Statistics

Cronbach's α	
scale	0.713

[3]

The summary shows that **200** out of 254 respondents were included in the computation after excluding those with missing values in any of the items in this section. A response of N/A is treated as a missing value.

The computed Cronbach's alpha of **0.713** slightly exceeds the commonly used threshold of 0.70 for acceptable reliability.

SECTION E5: TIME CONTROL

With **all items** retained:

Item Reliability Statistics

	Mean	SD	Item-rest correlation	If item dropped
				Cronbach's α
e5_1_recode	0.680	0.468	0.470	0.667
e5_2_recode	0.650	0.478	0.410	0.685
e5_3_recode	0.710	0.455	0.385	0.692
e5_4_recode	0.455	0.499	0.482	0.662
e5_5_recode	0.685	0.466	0.427	0.680
e5_6_recode	0.735	0.442	0.498	0.659

Overall alpha:

Scale Reliability Statistics

Cronbach's α	
scale	0.713
[3]	

All items show moderate item-rest correlation. Additionally, dropping any item does not substantially improve Cronbach's alpha.

CONCLUSION

- D2 (Leisure) shows moderate internal consistency
- D3 (Household Management) was analyzed descriptively due to limited applicable items
- D4 (Productivity) shows low internal consistency, suggesting possible refinement
- E2 (Time Quantity Satisfaction) demonstrates high reliability
- E5 (Time Control) shows acceptable reliability

These findings support the use of the instrument at the pilot stage, with opportunities for improvement in selected constructs.
